

CAST LANDSCAPE™

The back of the Set-N-Stone Module and the module body are manufactured out of PVC. The Flexible conduit is manufactured out of Polyethylene. PROBLEM how to glue both materials together? Silicone does not work, PVC cement does not work. You can tape them together or you can use a two-part epoxy to glue the parts together. This material by ELLSWORTH sets up in ½ hour and is 90% cured in one hour.

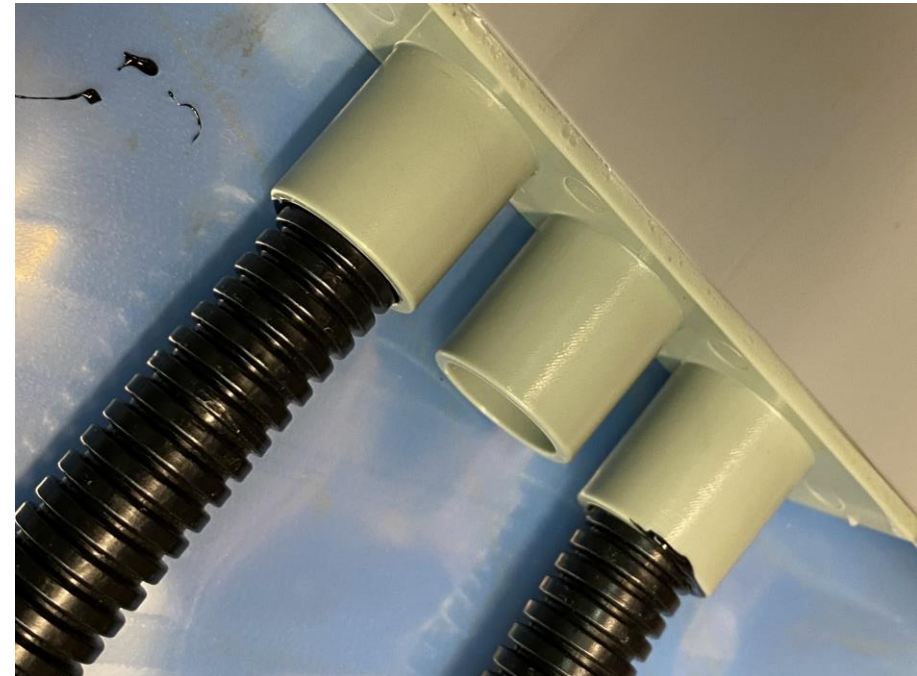

CAST LANDSCAPE™

Step #1. Attach static mixing tube to the epoxy cartridge. Pump out a thimble full of the material to make sure you have a correct ratio mix. Do this with a new cartridge and whenever using an old saved cartridge.

Step #2. Coat inside of conduit fitting **Lightly with epoxy**. Put a good coating on the exterior of the black conduit pipe. NOTE: Excess material put on the pipe pushes out of the fitting which can be wiped off. Excess epoxy in the fitting pushes epoxy inside the set-n-stone module. Don't want excess inside.

Step #3. Insert conduit fully into back socket of conduit fitting, wipe off excess epoxy. Material will be fully cured in one hour.

Great Web Site log on and have delivered right to your doorstep.
